

Criteria for the certification of encasings (bedding)

Encasings are textiles with a barrier function

- Covers for bedding (e.g. mattresses)
- Bedding with integrated mite protection (e.g. duvet, pillow)

The following is checked:

A barrier system, e.g. encasing, must constantly keep 95 percent of the allergy-causing particles, e.g. house dust mites, away from the person suffering from allergies.

Encasings with the Allergy Seal of Quality are suitable for (according to product specifications):

- House dust mite allergy

The Allergy Seal of Quality refers exclusively to allergies and intolerances. It certifies that a product has been tested and verified for its suitability for people with allergies or intolerances.

The manufacturer determines which products should be certified and has them checked by Service Allergie Suisse SA. Consumers will then find the relevant information both on the product packaging and in the product database at www.service-allergie.ch.
